**Tuff Stuff Performance Thermostats**  
 These thermostats flow up to 56 gallons per minute, as compared to ordinary thermostats that flow 37 gallons per minute, to maintain stated temperature. The 50 percent increased coolant flow reduces the delay in engine warm-up times, allowing trapped air in the cooling system to escape and stabilize the pressure of the cooling system. The stainless steel construction with an extra-large center port assures increased coolant flow and bridge design increases strength, stability & reliability and incorporates a bypass valve that allows a small amount of coolant to circulate before fully opening, assuring a fast warm-up. Ideal for high performance muscle cars, street rods and customs.

MSD-8362

**MSD HEI Distributor**

For value conscious enthusiasts, the Street Fire HEI is a great choice! We know the importance of a centrifugal advance in a distributor so our engineers made sure that the Street Fire received an advance assembly with coated weights and welded weight pins (not just pressed in like other models). Another area that you cannot afford to scrimp on is with a distributor gear. The Street Fire is fit with the same gear that is used on our Pro-Billet models. The metallurgy of this gear has been refined for years to perform through the harshest conditions.

They are engineered to handle all grades of synthetic, conventional and blended motor oils. The pleated media provides high capacity making them suitable for extended oil change intervals when used in accordance with the vehicle and motor oil manufacturers recommendation.
